

Chromebook Instructions

Step 1: Once logged on, **open the menu** from the bottom right (clock/Wi-Fi/battery /user icon) and choose "Settings"

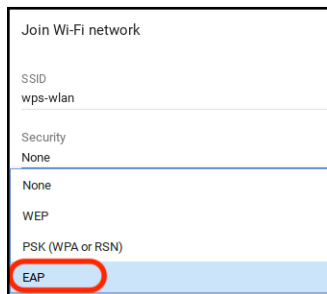

Step 2: Click **Add Connection** to expand that section, and then click "Add Wi-Fi..."

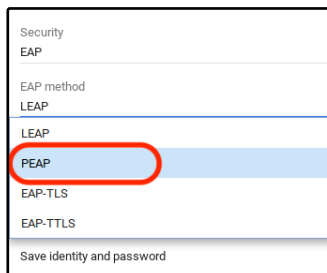

Step 3: In the "SSID" field, enter "wps-wlan"

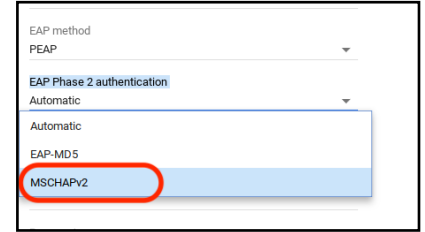

Step 4: In the "Security" drop-down, choose "EAP"

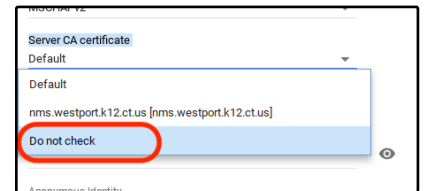

Step 5: In the "EAP method" list, select "PEAP"

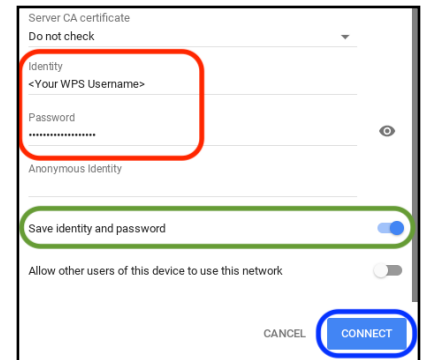

Step 6: In the "Phase 2 authentication" list, select "MSCHAPV2"

Step 7: In the "Server CA certificate" list, select "Do not check"

Step 8: In the "Identity" and "Password" field enter your WPS username and password. Check the option to "Save identity and password" and then click "Connect"

Step 9: If you view your wireless connections in the lower right menu, you will see that you are connected to "wps-wlan"
